Pre-meeting ASBMR, Cancer and bone: Seed and Soil

Osteocyte Regulation of Tumor Growth and Bone Metabolism in multiple myeloma
Presentation Number: 3
Presentation Type: Oral Presentation
Session: Translational: Metabolism & Adiposity in the Tumor-bone Environment
Session Date/Time: Wednesday, September 9 from 11:30 am – 12:45 pm ET---12:10pm

Abstract Title: Autocrine and paracrine Notch receptor 3 signaling in the myeloma niche stimulates tumor growth and bone destruction.
Presentation Number: 03
Presentation Type: Oral Presentation
Session: Oral Presentations
Session Date/Time: Thursday, September 10 from 10:00 am – 10:40 am ET

Abstract Title: Low doses of the bone-targeted Notch inhibitor BT-GSI exhibit higher anti-myeloma activity and preserve bone compared to unconjugated GSI or zolendronic acid
Presentation Number: P-170

Annual meeting

Speaker: Osteocytes regulate bone resorption via Sclerostin and Lrp4 signaling through Rankl dependent and independent mechanisms
Presentation Number: 1048
Presentation Type: Oral Presentation
Session: Translational: Osteoporosis - Pathophysiology
Session Date/Time: Monday, September 14 from 11:00 am ET - 12:15 pm ET---11:50am

Abstract Title: Autocrine and paracrine Notch receptor 3 signaling in the myeloma niche stimulates tumor growth and bone destruction.
Presentation Number: P-158

Abstract Title: Low doses of the bone-targeted Notch inhibitor BT-GSI exhibit higher anti-myeloma activity and preserve bone compared to unconjugated GSI or zolendronic acid
Presentation Number: P-170
